

PRODUCTION BOM

The **Operation** below must have a specified duration (Cycle Time), the number of units that can be produced during the cycle time and the work centre where the operation takes place.

For every operation, you may specify resources that are required to complete **one cycle**. Enter the number of individual resources required to produce the quantity in the 'Units Per Cycle' field.

For every operation, you may specify components that are required to manufacture the quantity of finished goods set in the **Quantity To Produce** field. You may set the value of the **Quantity To Produce** field greater than 1 if the quantity of required ingredients is too small and difficult to measure (like fractions of a gram, etc).

☐ Ignore cumulative lead time ⓘ
